	STABILITY OF THE FORINT (9 pp. German. undated)	
25X1		
25X1	This decument deals with the author's speculations on the stability of the Hungarian currency. It comes to the conclusion that the Hungarian government, with the concurrence of Jeno Varga, the well-known Seviet economist of Hungarian birth, is determined to maintain the stability of the forint.  The author's starting point is the thought that the huge investment program has placed anenormous strain on Hungarian finances and has given rise to inflationary tendencies which jeopardize the stability of the currency. Soltan Vas, President of the National Planning Office, and Karoly Olt, Minister of Finance, had plans of devaluating the forint, but these plans were subsequently overruled by Jeno Varga.	
	Instead of currency devaluation, Hungary has instituted a large-scale deflations ary policy, including a forced national lean; reduction of pensions; a drive to reduction costs; enforced saving; reduction of real wages; and an organized spending spree among the population, aided by the spreading of devaluation runges.	I.
	With a view to combating inflation the Hungarian government also authorized the national enterprises to plow back part of their profits into capital investments; erganized new savings banks; curtailed currency circulation; and nationalized privately-gwaed buildings.	
	The author concludes by hinting at the possibility of a tie-up of the Hungarian surrency with the ruble.	
25X1	Foreign language document or microfilm of it is available from CLA.
